After a Stroke

Version 3.0

Awareness

It is beneficial to understand the warning signs that may indicate a stroke and be sure to act immediately if such signs occur. Some of the common signs include:

- A sense of weakness on one side of the body
- Slurred speech
- Difficulty swallowing
- Pain, numbness or other unexpected sensations

The outcome of a stroke is generally much more favourable when treatment starts right away.

Making Life
EASY

PRODUCTS THAT IMPROVE YOUR LIFE

Every year many Australians and their families are affected by strokes.

Often in the aftermath of a stroke it can be difficult to find quality information or suggested coping measures for dealing with the lifestyle changes and rehabilitation requirements that may follow.

The National Stroke Foundation have an information line **1800 787 653** and a website www.strokefoundation.com.au, this is a great resource for advice on making life as easy as possible when dealing with strokes in your family or amongst friends.

What is a stroke?

Strokes are most commonly caused by loss of blood flow to parts of the brain. The effects vary greatly depending on several issues such as the section of the brain effected, how long blood flow was interrupted and how much damage has occurred.

Because there is no such thing as a 'typical' stroke, management of the patient's condition and recovery should be seen by a doctor.

How can we make your life easier?

There is good news along the path to recovery.

Many helpful and innovative products are available that have been designed specifically to improve your life and help regain or maintain independence!

Bathroom

Shower Chair

234338

Height adjustable legs with rubber tips cater for users of all heights while maintaining stability in any wet environment.

Over Toilet Aid

234397
